

PIENAAR ENERGY (PTY) LTD

200w photovoltaic panel parameters

Overview

This panel generates 200 watts under full sun. It uses silicon-based solar cells for efficiency. Monocrystalline is slightly more. Real-world performance varies significantly by location: A 200W solar panel produces 600-1,200 Wh daily depending on climate, with Southwest US locations generating twice the energy of Pacific Northwest installations. In the next sections, you'll get: Real-world output (not STC fantasy) so you know your daily energy budget. This post will explain what it does. These panels usually consist of 60-72 photovoltaic cells made from monocrystalline or polycrystalline silicon. Typically, it can generate an average of 600-800 watt-hours (Wh) of electricity per day, depending largely on sunlight exposure and panel efficiency.
