

PIENAAR ENERGY (PTY) LTD

3kW inverter life

Overview

EnergySage said that a typical centralized residential string inverter will last about 10-15 years, and thus will need to be replaced at some point during the panels' life. String inverters generally have standard warranties ranging from 5 to 10 years, many with the option to extend. While solar panels can last 25 to 30 years or more, inverters generally have a shorter life, due to more rapidly aging components. A common source of failure in inverters is the electro-mechanical wear on the capacitor in the inverter. The electrolyte capacitors have a shorter lifetime and age. But have you ever wondered: How long do solar inverters last?

Let's look at the life expectancy of a solar inverter, what can impact its lifespan, how to maintain it and finally, cover information on warranties and replacement. Solar panels tend to steal the limelight, but the real workhorse of a PV system is the solar inverter. This device takes all the DC. High-quality inverters are built with durable components and undergo rigorous testing, resulting in a longer lifespan compared to lower-quality alternatives.
