Advantages of photovoltaic support cast-in-place pile foundation

Overview

Advantages: Reliable force transmission and load-bearing performance; wide applicability; simple construction; strongest wind load capacity; flood and wind resistant. Driven piles are an attractive foundation alternative for ground mount solar panel systems since the materials are readily available and Contractors are familiar with the technology. How to improve the performance of solar photovoltaic systems?

However, it remains vital to develop methods of. The disadvantage is that the earth excavation and backfilling work is large, the construction period is long, the surrounding environment is damaged, and a large amount of waste and construction waste will be left in the land in the future. Concrete weight block foundations are often used together. The piles don't resist corrosion very well. Even with thickened hot-dip galvanizing, they can't be used in highly corrosive environments for a long time.

Advantages of photovoltaic support cast-in-place pile foundation

Solar support cast-in-place pile

Foundations for small solar installations can have a variety of forms, including cast-in-place concrete, precast concrete, driven piles, and helical screw-piles.

-  **Efficient Higher Revenue**
 - Max. Efficiency 97.5%
 - Max. PV Input Voltage 600V
 - 150% Peak Output Power
 - 2 MPPT Trackers, 100% DC Input Oversizing
 - Max. PV Input Current 16A, Compatible with High Power Modules
-  **Intelligent Simple O&M**
 - IP66 Protection Degree: support outdoor installation
 - Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
 - DC & AC Type I SPD: prevent lightning damage
 - Battery Reverse Connection Protection
-  **Flexible Abundant Configuration**
 - Plug & Play, EPS Switching Under 30ms
 - Compatible with Lead-acid and Lithium Batteries
 - Max. 6 Units Inverters Parallel
 - AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
