

PIENAAR ENERGY (PTY) LTD

Are N-type modules available in single-glass and double-glass

Overview

Since 2019, CSI Solar has been developing N-type TOPCon (Tunnel Oxide Passivated Contacts) technologies, and is now launching a diversified TOPCon module portfolio covering both 182 mm and 210 mm cells, single-glass and double-glass encapsulation, and various module sizes and. Since 2019, CSI Solar has been developing N-type TOPCon (Tunnel Oxide Passivated Contacts) technologies, and is now launching a diversified TOPCon module portfolio covering both 182 mm and 210 mm cells, single-glass and double-glass encapsulation, and various module sizes and. Canadian Solar was one of the first companies to introduce PV cell and module technologies that later became the industry mainstream, such as bifacial modules (back in 2010), modules with larger-format wafers (up to 210 mm) and, nowadays, N-type high-efficiency cells and modules. Since 2019, CSI. Interest in N-type bifacial modules has rapidly increased due to their ability to generate more power than conventional P-type bifacial thanks to their higher bifacial factor, lower degradation, lower temperature coefficient in addition more energy density and power class. Bifacial solar cells can. ges compared with other auxiliary materials manufacturers. As a horizontally integrated manufacturer, in addition to the backsheet, the company also develops and produces packaging materials such as main material cells and film, and has the conditions to conduct matching research and analysis of. Among the current module products on the market, only single-glass modules are equipped with tempered glass. The choice of front and shear materials is critical in determining the module's ability to withstand hail impacts. Over the past decade, the PV industry has experienced a great revolution.

Are N-type modules available in single-glass and double-glass

 **LFP 12V 100Ah**

n-Type TOPCon Bifacial Single Glass Encapsulation Solution

single glass modules with fully-tempered front glass have higher impact resistance and mechanical strength, and are less possibility to burst when used outdoors;

For N-type Bifacial Technology, Dual Glass Structure is Preferred

Dual glass is the preferred structure for the rear side cover of the N-type modules because the glass-glass version can maximize the advantages of the N-type.
