

**PIENAAR ENERGY (PTY) LTD**

# **Are photovoltaic panels hydrophobic and oleophobic**

## Overview

---

Hydrophobic coatings typically offer excellent water repellency but may be less effective against oily substances, while oleophobic treatments provide broader protection but often at higher manufacturing costs and potentially lower initial optical efficiency. These include anti-reflective characteristics to maximize light transmission, hydrophobic/oleophobic properties for self-cleaning, and enhanced durability to withstand environmental stressors. Discover the latest articles, books and news in related. If you're in search of a dependable method to improve the efficiency and lifespan of your photovoltaic panels, our Vetro Power's Nanotechnology provides an innovative coating designed specifically for solar panels. Can. Scientists in Egypt have created a self-cleaning, hydrophobic coating for solar panels that reportedly increases their efficiency by more than 30%. They used a coating solution based on polydimethylsiloxane (PDMS) and silicon dioxide (SiO<sub>2</sub>) nanocomposites, mixed with ethanol and isopropanol. The challenge is magnified when considering the 25-30 year operational lifespan of photovoltaic.

## Are photovoltaic panels hydrophobic and oleophobic
