

PIENAAR ENERGY (PTY) LTD

Australia PV Inverter

Overview

This guide, based on Clean Energy Council (CEC) data, highlights the top solar inverters for Australian homes, aligning with your quote comparison needs. Inverters convert direct current (DC) from panels to alternating current (AC) for home use. In short, a solar energy system's performance depends on picking the right inverter. But, just like solar, inverter efficiency is critical because the inverter acts as the “heart of the solar system” and dictates overall system performance. All the DC electricity produced by the solar panels will pass through the inverter to be converted into Alternating Current (AC) which can be consumed by home. Surprisingly no one, high-end Austrian manufacturer Fronius won gold for its 5th straight year, with 26% of the vote. Their reputation in Australia borders on legendary, known for providing well-supported, reliable products. 4 million Australian households \$1,600-\$2,000 annually on electricity bills at \$0. 6kW system (\$5,000-\$10,000), ensures efficient energy conversion.
