

**PIENAAR ENERGY (PTY) LTD**

# **Automatic assembly of batteries in energy storage cabinets**

## Overview

---

A battery cabinet system is an integrated assembly of batteries enclosed in a protective cabinet, designed for various applications, including peak shaving, backup power, power quality improvement, and utility-scale energy management. The Prismatic Fully Automatic Assembly Line is designed to deliver maximum throughput, consistency, and production reliability for modern energy storage applications. The line integrates cell aging, OCV sorting, automatic stacking, compression, laser cleaning, polarity inspection, laser welding. At JR Automation, our capabilities extend far beyond battery module and EV powertrain assembly. But more importantly, we're here to help build a better, more. A BESS cabinet (Battery Energy Storage System cabinet) is no longer just a “battery box. The system integrates automation, scalability, and adaptability, allowing the company to manufacture different formats without major modifications. The solution. As a quick introduction, here are the four production phases involved in automated battery manufacturing: Electrode production: Battery manufacturing begins with preparation of the active materials that will later hold the battery's electrical charge. Discover their applications, cost-saving benefits, and real-world success stories in renewable integration and grid stability. With global renewable energy capacity projected.
