# **Baku rooftop solar panels generate electricity**

## Overview

---

Azerbaijan has launched the country's biggest renewable energy investment project to date: the construction of two solar plants and a wind power plant. It marks a major step in Baku's ambitious plan to generate 30 percent of its power needs via renewable sources by 2030. Following electrification efforts, Azerbaijan plans to adopt rooftop solar panels, solar collectors to reduce consumption, and biogas solutions from wastewater, Rana Humbatova, Deputy Director of the State Agency for Renewable Energy under the Ministry of Energy, said during the second day of Baku. Then construction was started and in March 2022, President Ilham Aliyev attended the groundbreaking ceremony of the solar power plant. Construction work was completed in a record time, in a matter of 19 months, and the station was put into operation. The three plants - the 445. The objective of the project is to support Azerbaijan's energy transition through expansion of renewable electricity generation.
