Bangladesh s solar energy storage policy

Overview

Although Bangladesh has no PSH plants at present, the 2016 Power System Master Plan has set a target for the first project by 2030. Locations such as Kaptai, where an existing hydroelectric dam operates, or reservoirs in the hilly northeast could provide gigawatt-hour-scale. Climate-related plans set forth thereafter. This policy outlines the pathway to decarbonize the energy system highlighting RE technology adoption, low-carbon investment and the framework needed to combat the challenges of this transition, with the aim of securable Energy Certificate (REC). Similarly, Bangladesh Bank can establish a dedicated fund for rooftop solar with single-stage approval, reducing disbursement delays. The government can take up land-resource mapping to earmark suitable public land for utility-scale projects, which will help attract private investment. Furthermore, Bangladesh's government has proposed exempting renewable energy equipment, including energy storage systems, from import duties and value-added tax (VAT) under its draft Renewable Energy Policy 2025. If approved, the provisions would take effect upon publication in the country's official gazette. An assessment by the Institute for Energy Economics and Financial Analysis (IEEFA) reveals that Bangladesh will require up to \$980 million annually to meet its renewables goal of 2030. In that case, we will require to.
