# Battery cabinet cost improvement

## Overview

---

Commercial battery storage systems will cost substantially less by 2026. Advanced scenarios project a remarkable 52% reduction between 2022 and 2035. In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are developed from an analysis of recent publications that include utility-scale storage costs. Recent data shows that. In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region. The total cost of a battery energy storage system depends on several factors, including battery type, system capacity, installation complexity, and long-term maintenance. This article explores cost drivers, industry benchmarks, and actionable strategies to optimize your investment - whether you're managing a solar farm or upgrading.
