

PIENAAR ENERGY (PTY) LTD

Belarusian glass solar power generation

Overview

Belarusian photovoltaic cell modules have gained traction in global markets due to their cost efficiency and durability in harsh climates. Local sourcing offers several key advantages: Reduced Logistics Costs and Lead Times: Sourcing bulky or fragile materials like glass and aluminum frames from within the country or region. Discover how Belarusian solar technology is shaping renewable energy solutions across industries. Designed for both residential and industrial applications. This project, selected through an international tender with six proposals, will be the largest energy storage system in Central America once operational by the end of 2025. In terms of global horizontal irradiation (GHI) and direct normal irradiation (DNI), most of Belarus receives only 1 100 kilowatt hours per square metre (kWh/m²) to 1 400 kWh/m² of GHI, and around 1 000 kWh/m² of DNI. This means that concentrated solar power (CSP) generation is impractical, but production by means of solar PV is, currently, used mainly in heat generation.
