

PIENAAR ENERGY (PTY) LTD

Benefits of installing behind-the-meter solar container energy storage systems

Overview

These systems, which are considered as “behind-the-meter” (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation. □ BTM systems give facilities the option to reduce demand charges¹ imposed by the utility and leverage time-of-use rates² to lower. fluctuating electricity demand. Advancing towards net-zero carbon energy production will require consumers to efficiently manage energy usage, ther by reducing strain on the grid. From pv magazine USA Solar projects can generally be placed in two buckets: they are either large utility-scale ground-mounted projects. Whilst capex and uncertainty on payback are still barriers to taking up behind-the-meter (BtM) generation, there are significant cost savings available from reduced reliance on grid imports. The addition of BtM battery energy storage systems (BESS) can improve the security of supply for a site, as. Installing on-site renewable energy systems is a common strategy facility owners can use to save money, reduce their greenhouse gas emissions, and add resiliency to their facilities by generating their own electricity. However, this technology is broadly capable of providing a variety of grid services, extending beyond.
