

**PIENAAR ENERGY (PTY) LTD**

# **Can photovoltaic panels drive several air conditioners**

## Overview

---

The answer is yes they can, but there are some measures to take before setting up your solar panels with an A/C unit. The effectiveness of your solar panel setup depends on various factors, including what system you use, the type of solar panels used, and the size of the space you want to cool. With the right setup, you can keep your home cool without sending your electric bill sky high. Then, we must factor in that two identical systems in two different locations will have varying results. However, the air conditioning unit presents a standalone challenge - it is the most energy demanding appliance in the house.
