## Overview

---

### Is a Fully Solar Powered House Possible in 2025?

The short answer is yes - a fully solar powered house is not only possible but increasingly practical for most homeowners. Is my home suitable for solar panels?

Solar panels are built to work in all climates, but in some cases, rooftops may not be suitable for solar systems due to age or tree cover. If there are trees near your home that create excessive shade on your roof, rooftop panels may not be the most ideal. Solar, or photovoltaic (PV) panels as they're referred to in NFPA 1, Fire Code, are becoming more and more common on one- and two-family dwelling and townhouse roofs. Since the 2016 edition of NFPA 1, access pathways have been required on roofs to facilitate fire service access as well as egress. Complete Energy Independence is Achievable: Modern solar technology with 21-24% efficiency panels and advanced lithium-ion battery systems can provide 100% energy independence for most homes, even in challenging climates like Seattle where homeowners achieve 98% solar coverage. Dramatic Cost. Purchasing a home with solar panels. Not only do solar panels increase your home's value, but they also lower or completely eliminate your electric bill, and reduce your carbon footprint at the same time. The most popular time to buy a home is from March to June, so if you're currently looking to. Going solar can lower your home's carbon emissions and save you money on utility bills, but there are some things you'll want to know before buying a home with solar panels.
