

PIENAAR ENERGY (PTY) LTD

Can rural photovoltaic panels be sold now

Overview

The new rules eliminate USDA support for large solar farms on prime farmland and ban foreign-manufactured panels in all funded projects. As shown in Map 1, roughly 18% of ground-mounted PV facilities in the U. were installed between 2021 and 2023, with a notable portion of these projects built on former cropland or pasture in rural areas. This trend has raised skepticism in rural communities, prompting questions about land value. The U. Department of Agriculture announced sweeping changes to renewable energy funding this week, fundamentally reshaping access to federal solar incentives for rural America. But the decision isn't just about taking the first offer—it comes down to choosing between two very different paths: leasing or selling. While land leases generally offer protection for landowners so that farms can be reclaimed from the solar. Over the last decade, solar energy production has grown 25% on average per year and installation costs have dropped more than 40%, according to the Solar Energy Industries Association (SEIA), which tracks trends and trajectories in the solar industry. Figure 1 shows the dramatic increase in annual. Leer en español: Agrovoltaica: ¿Próximamente en un campo cerca de usted?

In 2020, U. renewable energy production (and consumption) hit a record high. The increase was mainly driven by more solar and wind.
