

PIENAAR ENERGY (PTY) LTD

**Canberra metro station uses
solar energy storage cabinets
for two-way charging**

Overview

The power station combines high-efficiency solar panels with lithium-ion battery systems, achieving an impressive 85% round-trip efficiency. Key features include: "Canberra's approach demonstrates how energy storage can turn intermittent renewables into a reliable. The project has set a target of zero net carbon emissions in construction and operations. This is being achieved through design initiatives like solar panels on the roof of the light rail depot, solar powered lights, and regenerative braking technology. This project not only addresses energy reliability but also paves the way for scalable solutions in reg As the world. In this video, Andrew Pearce takes us through the onboard energy storage system (battery) retrofit, now underway on our existing light rail vehicle. | Canberra Metro Operations (CMET) Exciting progress as we move closer to Stage 2A. In this video, Andrew Pearce takes us through the onboard energy. Battery Specifications: The Big Canberra Battery is a 250-megawatt (MW), 500 MWh (megawatt-hour) energy storage system. "Battery storage is no longer an option - it's the backbone of reliable renewable energy systems," says Dr.

Canberra metro station uses solar energy storage cabinets for two-

Last year, 117 MWh of solar

Last year, 117 MWh of solar energy was produced by the solar panels located on our depot roof. This energy is used to power the depot admin building.
