

PIENAAR ENERGY (PTY) LTD

Carbon and clean energy solutions

Overview

CCS is central to achieving net-zero goals by addressing emissions from hard-to-abate sectors such as refining, power generation, and industrial processing. We are the point source carbon capture experts, providing industries with the next generation solutions they require to adapt to a net zero world. Our global company is led by industry experts with over a decade of experience designing, building, financing and operating industrial carbon capture. For over 15 years, we have been focused on advancing distributed decarbonization through electric vehicle charging solutions, solar aggregation and ESG services. We invest in projects, people, & software with purpose. We are tenacious and inquisitive in everything we do. We seek new & creative ways to tackle. With a global push to achieve net-zero emissions by 2050, CCS is evolving rapidly to address the dual challenge of reducing greenhouse gas emissions while ensuring energy security. Carbon capture and storage (CCS) represents a suite of advanced technologies designed to capture carbon dioxide (CO₂). The Clean Energy Solutions Center (CESC) connects governments, regulators, and practitioners with trusted policy guidance, on-demand expert assistance, and high-quality training to scale clean, affordable and reliable energy systems worldwide.

Carbon and clean energy solutions

4 Cutting-Edge CCS Technologies Reshaping the Future of Carbon ...

The process leverages proven moving and fluidized-bed technologies to efficiently transform various fuel types, including biomass, coal, and natural gas, into clean energy and ...
