

PIENAAR ENERGY (PTY) LTD

Chile thermal energy storage

Overview

There are three approaches to energy storage available in Chile including Carnot Battery (thermal energy storage), battery energy storage systems (BESS), and liquid air energy storage (LAES). As renewables scale up, the need to store energy is increasing. Chile is leading the way in Latin America and has more projects in the pipeline, but hurdles remain Chilean president Gabriel Boric (centre) at the inauguration of an energy storage plant in the northern region of Antofagasta in April. With 23 energy storage projects already approved, totaling an impressive 3,000 MW of capacity, Chile is at the forefront of innovation and efficiency in Latin America. During its recent participation in COP28 in Dubai, Chile not only reaffirmed its commitment to renewable energy, but also. According to Coordinador Eléctrico Nacional (CEN) Chile's Independent System Operator, as of May 2025, Chile oversees a total installed power capacity of 37. Chile had 91MW of capacity in 2022 and this is expected to rise to 189MW by 2030. Through strategic partnerships, Fluence has.

Chile thermal energy storage

Energy storage is a challenge and an opportunity for Chile

Newer alternatives include molten salt storage - which uses salt as a medium for thermal energy - and gases produced using renewable sources, such as green hydrogen and green ...
