

PIENAAR ENERGY (PTY) LTD

Chilean solar container energy storage system solar container lithium battery

Overview

The site, the first solar-plus-storage project built from scratch by Engie Chile, will feature 208 lithium-ion battery containers. The context: The South American nation's brisk shift to clean electricity was sparked by staunch community opposition to traditional power projects. That prompted Chile to rapidly move to build more power generation capacity, with much of that effort focused on renewable energy resources and battery energy storage systems (BESS). The country as part of that ambition has a goal of producing at least 70% of its electricity from renewable energy by the end of 2025. Chile has strong conditions for wind and solar energy, and is pursuing storage to help overcome intermittent supply (Image: Ximena Navarro / Dirección de Prensa, Presidencia de la República de Chile) Renewable energy is Latin America's present and future. Owned by ENGIE Chile, the plant is located in María Elena, in the Antofagasta Region. It has a storage capacity of 638 MWh, with 139 MW of solar. Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the reliability of the country's electric grid as it pursues new renewable energy generation. Chile has the potential to run.

Chilean solar container energy storage system solar container lithium

In numbers: Solar and battery storage powerhouse Chile sets new ...

Chile has reached fresh milestones in its energy transition amid a rapid build-out of solar and battery storage infrastructure. The context: The South American nation's brisk shift to clean ...
