# **Colombia Smart Grid Energy Storage**

## Overview

---

The proposal establishes guidelines for planning, remunerating, and operating storage assets within the National Interconnected System (SIN) and the Non-Interconnected Zones (ZNI). The Ministry of Mines and Energy aims to formalize the role of storage in providing electrical. From isolated regions in La Guajira to industrial hubs in Antioquia, storage is reshaping how electricity is produced, delivered, and consumed. Credit: Colombia Presidency Colombia is entering a make-or-break moment in its pursuit of a cleaner, more resilient energy system. As the country confronts the overlapping pressures of climate. Utility and independent power producer (IPP) Celestia has deployed a solar co-located lithium iron phosphate (LFP) BESS in Colombia. Celsia has deployed the battery energy storage system (BESS) at its 9.9MW Celsia Solar Palmira 2 farm in Valle del Cauca to help increase the generation capacity of. The new mechanism introduces technology-specific products, extends commissioning deadlines to 2035, and formally recognises energy storage as a core asset for power system reliability. The revised rules aim to correct past design flaws and attract new players to the Colombian electricity market. Since renewable energy naturally fluctuates, government and grid operators need to decouple themselves from the idea that energy demand can only be met by ramping up its generation.
