# Construction of underground cables for photovoltaic panels

## Overview

---

When solar developers directly bury PV wires, they install them in trenches underneath the panel rows. Issues with DC-string cabling (wiring) on solar photovoltaic (PV) systems are emerging as a significant area of concern related to system failures, underperformance, and safety issues. The SolarGrade PV Health Report, produced by a large solar PV inspection company, Heliovolta, compiled 60,000. PV wire doesn't seem like a big deal, but moving generated power from solar panels to the electrical grid would be impossible without it. To the untrained eye, installing thousands of feet of wire seems like a pretty straightforward process.
