

PIENAAR ENERGY (PTY) LTD

Continuous punching of photovoltaic bracket

Overview

When manufacturing photovoltaic brackets, one question consistently sparks debate: Should punching come before galvanizing?

This seemingly simple sequence actually determines long-term durability, installation efficiency, and project costs. The application relates to a punching and forming production line of a photovoltaic bracket C-shaped steel, which comprises a feeding device, a punching device, a forming device, a cutting device and a discharging device which are sequentially arranged, wherein a first buffer device is arranged. The solar bracket roll forming machine is a special cold-roll forming equipment designed for processing profiles of solar photovoltaic (PV) brackets. It can turn raw materials such as galvanized steel strips and aluminum - magnesium - manganese alloy coils into finished C - shaped, U - shaped, Z - . Drivers to improve PV O& M include the following: increase efficiency and energy delivery (kWh/kW), decrease downtime (hours/year), extend system lifetime (say from 25 to 40 years), reduce cost of O& M (\$/kW/year), ensure safety and reduce risk, enhance appearance, and meet requirements of. The Photovoltaic (PV) Bracket Production Line is a fully automated solution designed for the mass production of solar mounting structures (solar struts/channels). ?

These production lines use high r Photovoltaic Support Rolling Machine. Support roll fo ming for both heavy and light-duty use. We use advanced technology and innovative design to provide hi 0000 tons, carbon steel bracket capacity of 120,000 tons.

Continuous punching of photovoltaic bracket

Operational procedures for photovoltaic bracket punching machine

The roll forming machine for PV Bracket (the strut channel roll forming line) is to make the brackets of C shape with punching holes used for photovoltaic support.
