

**PIENAAR ENERGY (PTY) LTD**

# **Cost of large-scale photovoltaic modular energy storage systems for european farms**

## Overview

---

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. Market analysts routinely monitor and report the average cost of PV systems and components, but more detail is needed to understand the impact of recent and future technology developments on cost. Consequently, benchmark systems in the utility-scale, commercial, and residential PV market sectors. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NLR's PV cost benchmarking work uses a bottom-up. Most large-scale solar + storage projects use BESS (Battery Energy Storage Systems), designed for 1 to 4 hours of discharge, optimising dispatch to the grid during peak demand or pricing events. This dramatic shift transforms the economics of grid-scale energy storage, making it an increasingly viable solution for Europe's renewable. Feed-in tariffs (FiTs) and renewable portfolio standards (RPS) remain critical policy tools influencing photovoltaic (PV) energy storage deployment. In Europe, Germany's 2024 Renewable Energy Sources Act accelerates project approvals by classifying storage-integrated solar plants as system-critical. These massive systems—also called grid-scale or utility-scale storage—connect directly to the power grid and operate at the megawatt (MW) scale, dwarfing residential systems that typically measure in kilowatts (kW).

---

### Large-scale Photovoltaic Energy Storage System Market

The growth trajectory for grid-integrated and off-grid photovoltaic (PV) energy storage systems diverges sharply across regions, driven by infrastructure maturity, energy access policies, and geographical challenges.

### Real Cost Behind Grid-Scale Battery Storage: 2024 European Market

For a typical 100 MW/400 MWh utility-scale installation in Europe, hardware and equipment costs currently range from EUR40 to EUR60 million. However, these costs are expected to decrease by 8-10% annually ...
