

**PIENAAR ENERGY (PTY) LTD**

# **DeliCan a solar calculator store electricity**

## Overview

---

A solar calculator uses a battery to store energy for operation when there is insufficient sunlight. The main components include solar cells, a rechargeable battery, and the calculator's circuitry. This device converts sunlight into electricity. Energy Efficiency: They provide continuous performance even when sunlight is scarce, thanks to their dual power source of. Photovoltaic Effect: The photovoltaic effect is the process by which solar cells convert sunlight into electricity.
