Direct-in wind power generation system

Overview

Direct-drive wind turbines use a system where the rotor is directly connected to the generator without the need for a gearbox. Unlike conventional wind turbines that rely on. Direct-drive permanent magnet synchronous wind power systems, characterized by their simple structure and high reliability, have gradually become the mainstream in wind power systems. By controlling the pitch angle to reserve surplus power, the wind turbines can actively engage in frequency. . 4 shows the double-fed wind power generation system.
