

PIENAAR ENERGY (PTY) LTD

Dish-type solar thermal power generation

51.2V 300AH

Overview

The dish/engine system is a concentrating solar power (CSP) technology that produces smaller amounts of electricity than other CSP technologies—typically in the range of 3 to 25 kilowatts—but is beneficial for modular use. As a kind of clean energy, solar thermal power generation has its unique development advantages compared with other energy utilization methods. (1) In terms of resource availability and development, solar energy is superior to wind energy, biomass energy, geothermal energy, ocean energy and other. Parabolic dish geometry concentrates light in a single focal point, i., all sun rays that are parallel to the axis of the parabola are directed towards the central receiver. Harnessing solar energy efficiently, a dish-type concentrated solar power system uses mirrored dishes to capture sunlight, offering a captivating insight into its innovative energy collection process. The dish-Stirling system can.
