Do buildings need photovoltaic panels

Overview

Yes, most new single-family homes and low-rise multifamily buildings must include a solar PV system per the 2025 Title 24 energy code. Are there any exemptions to the solar mandate?

Some homes may be exempt if they have limited roof space or are enrolled in approved community solar. Photovoltaic (PV) technology is an ideal solution for the electrical supply issues that trouble the current climate-change, carbon-intensive world of power generation. PV systems can generate electricity at remote utility-operated "solar farms" or be placed directly on buildings themselves. These requirements do not apply to additions or alterations to existing buildings. Decrease in carbon footprint, 3. Promotion of energy independence. One of the most significant benefits is the reduction.
