

PIENAAR ENERGY (PTY) LTD

Do photovoltaic panels have an impact on satellite dishes

Overview

Solar energy systems can potentially impact the installation of satellite dishes by obstructing the line of sight between the satellite and the dish. Switzerland-based utility CKW has installed PV systems on disused satellite dishes at telecom company Leuk TDC's headquarters, using SolarEdge's DC-optimized inverters and power optimizers to maximize system output. Instead of aiming them at satellites, they could follow the sun. And instead of radio waves, they could capture solar energy that could then be used to generate electric. A Swiss telecom service provider converted unused satellite dishes into solar dishes, powering its data center's rising energy needs. However, with proper planning and positioning of. CKW, a leading Swiss provider of integrated energy and building technology solutions, has successfully transformed unused satellite dishes located on the premises of Leuk TDC, a Swiss telecom service provider, into cutting-edge solar installations. This innovative project, developed in.

Do photovoltaic panels have an impact on satellite dishes

12.8V 100Ah

Innovative Use of Satellite Dishes for Solar Power Generation

Given the complex orientation and inclination of the solar panels on the satellite dishes, shadows and varied inclinations threatened to reduce the efficiency of the solar system.

Giving old satellite dishes a new lease on life

The solar panels are fitted to the insides of the satellite dishes, where the solar irradiation is at its strongest. The bright

surfaces of the satellite dishes reflect the sunlight onto them.
