Dyson sphere solar power generation power

Overview

A Dyson sphere is a hypothetical megastructure that encompasses a star and captures a large percentage of its power output. [1][2][3] The concept is a thought experiment that attempts to imagine how a spacefaring civilization would meet its energy requirements once those requirements exceed what. One of the most intriguing and daring ideas proposed in response to this cosmic conundrum is the Dyson Swarm, an extraordinary megastructure concept designed to capture the lion's share of a star's energy output.
