

**PIENAAR ENERGY (PTY) LTD**

# **Energy metering of energy storage system in Singapore**

## Overview

---

Developed in collaboration between the Energy Market Authority (EMA) and SP Group, this innovative project aims to enhance the stability and efficiency of Singapore's electricity grid while facilitating greater integration of renewable energy sources, particularly solar power. Affordable, reliable and sustainable. He also announced that Singapore would set its installed solar capacity target to at least 2 gigawatt-peak by 2030, enough to power Singapore's most viable clean energy source. However, it is intermittent by nature and its output is affected by environmental and weather. However, as Singapore looks to renewable energy and power imports to transition to a low-carbon energy system, and moves towards the electrification of its transport system, it is increasingly vital to ensure that its grid infrastructure remains stable and resilient. Industrial and utility-scale consumers are prioritizing integrated. Battery energy storage systems (ESS) provide critical frequency and stability support to power grids. The. Singapore has surpassed its 2025 energy storage deployment target three years early, with the official opening of the biggest battery storage project in Southeast Asia.

## HANDBOOK FOR ENERGY STORAGE SYSTEMS

Pumped Hydro Energy Storage, which pumps large amount of water to a higher-level reservoir, storing as potential energy, is more suitable for applications where energy is required for sustained periods.
