

PIENAAR ENERGY (PTY) LTD

Energy storage batteries made in the Netherlands

Overview

This energy storage start-up from the Netherlands, founded in 2023 develops Iron-air batteries for large-scale long-duration energy storage. Iron-air batteries store energy for durations of 24-100 hours, at extremely low-cost, with high energy density and without risk of fire. The SLDBatt project brings together TRL 7 battery technologies – including molten sodium-salt, saltwater acid-base flow, and hydrogen-iron flow batteries – to deliver an innovative and cost-effective long-duration energy storage solution. Elestor has created the enabling technology for a 100% clean electricity. RWE has commissioned one of the largest Dutch battery storage systems in the Netherlands at its Eemshaven power station. With a total capacity of 35 megawatts (MW) and a storage capacity of 41 megawatt hours (MWh), the battery will be used to balance power supply and demand in the Dutch power grid. In a significant development for the renewable energy sector, Moonwatt has officially commissioned Europe's inaugural sodium-ion energy storage project at the Connectr Energy Innovation Lab in Arnhem, Netherlands. They are looking for partners for deployment of.
