Energy storage for load shifting paraguay

Overview

We explore how conventional technologies and price-points of battery storage, thermal storage, rooftop solar, wind turbine, flexible operation of hydropower, and demand side management methods might complement the cost-effective options. A shift is underway where modern economies are expecting 24-7 power, load-growth in emerging markets can be strong, universal access is a must, and tariffs cannot be simply cost reflective for parastatals, especially in view of rising costs for the utility to maintain and upgrade infrastructure-.

Summary: The Asuncion Flywheel Energy Storage Technology Project represents a groundbreaking leap in stabilizing Paraguay's renewable energy grid. Combining high-speed rotational mechanics with smart grid integration, this initiative addresses voltage fluctuations and storage gaps in solar/wind.
