Examples of solar power plants in China

Overview

In 2011, China owned the largest solar power plant in the world at the time, the Huanghe Hydropower Golmud Solar Park, which had a photovoltaic capacity of 200 MW. Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. This is expected to contribute 33.7% by the end of 2030 with capacity of installations aggregating up to 4,822GW. These projects, measured not in megawatts but in gigawatts, represent more than just a commitment to clean energy. Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off their competitive edge.

Examples of solar power plants in China

Solar power in China

In 2011, China owned the largest solar power plant in the world at the time, the Huanghe Hydropower Golmud Solar Park, which had a photovoltaic capacity of 200 MW. In 2018, it held the record again ...
