Exhaust air under the generator

Overview

The first option is to connect the generator's exhaust to a long flexible exhaust tube and route it to a well-ventilated area. Distance from Structures: Ensure the generator is positioned. The use of gas fired, and diesel fueled generators for back-up power and co-generation is increasing due to a higher demand on the current electrical infrastructure, the growing need for backup power and the necessity to improve overall efficiency to ensure uninterrupted power. Cooling and combustion air directly impact engine and package unit performance and. Proper ventilation systems are not just a regulatory requirement; they are critical to prevent the accumulation of hazardous exhaust gases and to ensure the generator operates under optimal conditions. Works to request a Sizing Report to.

LiFePO₄ Battery, safety

Wide temperature: -20~55°C

Modular design, easy to expand

The heating function is optional

Intelligent BMS

Cycle Life: > 6000

Warranty: 10 years
