Facts about nickel

Overview

Nickel is a ; it has Ni and 28. It is a silvery-white lustrous with a slight golden tinge. Nickel is a hard and . Pure nickel is chemically reactive, but large pieces are slow to react with air under because a of that prevents further corrosion forms on the surface. Even so, pure nickel is found in Earth's crust o.

Facts about nickel

10 Interesting Facts About Nickel (the element)

Nickel is a hard, silver-white transition metal (symbol Ni, atomic number 28) whose high strength, corrosion resistance, and thermal stability make it indispensable in stainless steels, ...
