

**PIENAAR ENERGY (PTY) LTD**

# **Father of wind power generation**

## Overview

---

Bill Heronemus is known the world over as the “father of modern windpower” and the inventor of the wind turbine array, windship, wind furnace, and offshore hydrogen flotilla ideas. He is generally credited with the invention of the terms “windfarm,” “windshaft,” and “windsmith”. Wind power has been used as long as humans have put sails into the wind. Wind-powered machines used to grind grain and pump water — the windmill and wind pump — were developed in what is now Iran, Afghanistan, and Pakistan by the 9th century. Wind turbines, such as the first electricity-generating windmill. James Blyth

The work of James Blyth (1839-1906) is largely forgotten now except for those students of the history of electricity generation, in which he holds a unique place as but he was the first person in the world to physically harness the power of the wind to make electricity via a wind. This is a memorial record and obituary of a remarkable wind power engineer, Bill Heronemus of the University of Massachusetts and, previously, of the US Navy. This evolution, spanning centuries, cannot merely be attributed to technological advancements; it is also a story. Wind is a growing source of reliable and clean energy around the world and a crucial part of the journey to net zero.
