Fengjun 5 generator abnormal noise

Overview

- Explanation: An imbalance in the load distribution can cause the generator to work unevenly, leading to abnormal vibrations and noise. They are supposed to absorb vibrations. Ignoring knocking noises can lead to more significant engine. These noises are often an indication that something is wrong, and addressing the issue early can save you from costly repairs or, worse, a complete breakdown of your equipment. If you've ever wondered why your generator sounds rough or louder than usual, this article breaks down the common causes. It's normal for a generator to produce noise, but a generator producing loud, strange operational noises isn't normal. Continue reading to understand the common causes behind these sounds and learn how to respond to restore your generator. - Noise Characteristics: Rattling or clanking sounds. When you meet below phenomena, you can judge the faults and deal with it in time.
