

## PIENAAR ENERGY (PTY) LTD

# Firm dispatchable resource

## Overview

---

Firm dispatchable power is the amount of power or power producing capacity that a generating plant or transmission facility expects to always be available. [1] Conventional power sources like gas, coal and some nuclear. Dispatchable generation refers to power sources that can be adjusted on demand by grid operators to match supply with electricity demand. Examples of dispatchable generation include coal-fired plants, natural gas plants, and large hydroelectric plants that can quickly ramp up or down depending on. Firm power: The US EIA defines firm power as - “[Firm power is] Power or power-producing capacity, intended to be available at all times during the period covered by a guaranteed commitment to deliver, even under adverse conditions. Firm. The energy industry is currently navigating the challenge of providing reliable, dispatchable power from traditional fossil fuels while simultaneously integrating intermittent clean energy sources.

### Understanding Dispatchable and Non-Dispatchable Generation Assets

Traditional fossil fuels like coal, natural gas, and oil are common examples of dispatchable generation assets. They can be ramped up or down to meet customer demand in real-time, making them a ...
