

PIENAAR ENERGY (PTY) LTD

Flexible photovoltaic bracket trough structure

Overview

The invention relates to the technical field of brackets, and provides a flexible photovoltaic bracket suitable for complex terrains, which comprises steel upright posts, wherein a plurality of groups of steel upright posts are arranged, the number of each group of steel upright posts is 2. The invention relates to the technical field of brackets, and provides a flexible photovoltaic bracket suitable for complex terrains, which comprises steel upright posts, wherein a plurality of groups of steel upright posts are arranged, the number of each group of steel upright posts is 2. When designing flexible photovoltaic supports, the requirements of structural stability, weather resistance, lightweight and strength must be comprehensively considered to ensure the long-term reliability of the supports in different climate conditions. In the selection of materials, aluminum is used. The utility model provides a flexible photovoltaic bracket, which comprises at least two bracket bodies, wherein steel beams are longitudinally arranged on the bracket bodies, a plurality of connecting plates are vertically arranged on the side surfaces of the steel beams at intervals along the length. The support model consists of six spans, each with a span of 2 m. The spans are connected by struts, with the support cables having a height of 4 m. Flexible photovoltaic (PV) support structure offers benefits such as low construction costs, large span length, high clearance, and high adaptability to complex terrain. The model consists of six spans, each with a span of 2 m.

Flexible photovoltaic bracket trough structure

Improvement of the flexible support photovoltaic module system: A ...

Since 2000, flexible support photovoltaic module structure systems have been widely used because of their advantages such as short construction period, large span, good economic ...
