Goose-shaped photovoltaic construction

Overview

Abstract This paper presents a comprehensive investigation into the potential of flexible curved solar photovoltaic (PV) panels, emphasizing their ability to enhance solar energy capture while integrating aesthetically into various architectural contexts. Results show that: in the construction of herringbone photovoltaic panels, array angle is preferably not greater than 45° , installation inclination angle is not greater than 50° , and optimal array distance is between 1. Traditional flat solar panel systems. The invention discloses a wild goose-shaped plate prestress accurate control construction process, which comprises the steps of setting a shaped steel die, binding steel bars, forming holes by prestress, constructing concrete, curing the concrete and tensioning the post-tensioning prestressed. Maple Leaf Power Systems is a relatively new player in the solar power world, but they're already making a splash with their line of solar panels, batteries, inverters, and this new modular solar panel ground mounting system. Right away, this Maple Leaf Goose Solar Panel Mount instantly stood out.

Goose-shaped photovoltaic construction

CN111101708A

The invention relates to the technical field of building construction, in particular to a precise control construction process for the prestress of a wild goose-shaped plate.
