Helsinki peak shaving

Overview

With peak shaving, a consumer reduces power consumption ("load shedding") quickly and for a short period of time to avoid a spike in consumption. An increasing share of electric vehicles can mean excessive peak loads in low-voltage power distribution networks. Introducing peak shaving mechanisms to the charging systems, such overloads can be mitigated significantly. The first contribution of this study is to quantify the amount of. There are two main approaches to this: peak avoidance and peak shaving. Power consumption peaks are important in terms of grid stability, but they also affect power procurement costs: In many countries, electricity prices for large-scale.

Helsinki peak shaving

Peak avoidance and peak shaving

Peak avoidance and peak shaving follow different strategies, but complement each other perfectly. While avoidance relies on forward planning to avoid peak loads in the first place, shaving ...

Quantification of peak shaving capacity in electric vehicle charging

The first contribution of this study is to quantify the amount of flexibility that electric vehicles can contribute to peak load reduction so that the drivers can still fully charge the batteries of their vehicles.
