How big an inverter should I use for a 60kW photovoltaic power station

Overview

Most solar professionals recommend sizing your inverter for solar panels between 75% and 115% of your total panel wattage, with the sweet spot around 1:1. Choosing the right solar inverter size is critical—and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means. A solar inverter should closely match your solar system's output in kW—typically within 80% to 120% of your total panel capacity. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. Your inverter needs to handle that. The optimal solar inverter size depends primarily on the power rating of the solar PV array. You need to match the array's rated output in kW DC closely to the inverter's input capacity for maximum utilization. The single machine power is between 3-60kW, and the mainstream models have a single machine power of 30-40kW, suitable for small and medium-sized photovoltaic systems, small and medium-sized.

Perfectly Size Your Inverter for

Voltage range: 691.2-947.2V

>6000 cycles (100%DOD)

Rated battery capacity: 216KWH (customizable)

EMS communication: 4G/CAN/RS485

Peak Output

Most solar professionals recommend sizing your inverter for solar panels between 75% and 115% of your total panel wattage, with the sweet spot around 1:1.15 --meaning your inverter is slightly smaller ...
