How long does it take to replace the photovoltaic panel inverter

System Layout

Overview

For most setups, replacing an inverter can take 1-3 hours, depending on the system's complexity and whether professional installation is required. A typical warranty lasts 5 to 10 years, which is shorter than the solar panels themselves, indicating that at least one replacement will be necessary during the solar system's lifespan. With costs ranging from. First, the average lifespan of a solar inverter is about 10 years. Your inverter may outlive these averages, but it's smart to plan for them, especially if your warranty is nearing the end. It's often considered the most vulnerable component in a solar energy system because it contains electronic components that degrade over time. String inverters, microinverters, and string inverters paired with DC optimizers all have their own expected lifespans. Solar inverters last between 10 to 25 years depending on the type, with string inverters averaging 10 to 15 years and microinverters reaching 20 to 25 years.
