

**PIENAAR ENERGY (PTY) LTD**

# **How long is the life of heat dissipation photovoltaic panels**

## Overview

---

While properly cared for panels can last up to 50 years, the accepted industry estimation of how long solar panels last is 25–30 years. 25% degradation rates cost 10-20% more upfront, they produce 11. If you're counting on solar to deliver long-term. Luckily, the lifespan of solar panels will allow you to produce energy for many years, providing a great return on investment. Its performance naturally declines over time, eventually rendering its "useful life" complete. Reputable solar providers should also offer strong workmanship warranties (sometimes called a labor warranty) to protect your system's major components, such as the inverter and battery.

### How Long Do Solar Panels Last? Complete 2025 Lifespan Guide

Climate significantly impacts lifespan: Solar panels in consistently hot climates degrade nearly twice as fast (0.88% annually) compared to those in cooler regions (0.48% annually), making ...
