How many boxes of tobacco can be stacked with photovoltaic panels

Overview

When full, intact and dry, the boxes can be vertically stacked indoors up to 4 boxes high for extended periods of time. Up to three stacks of 40 panels can be arranged side by side, accommodating a total of 120 panels per pallet. Usually, separators are placed between each module, and extra protections are added to the four corners of each module stack. In some cases, modules are also packed in individual cartons boxes to be packed into a large. Even high-quality solar panels packaged in weak cardboard boxes can lead to microcracks during transport, especially on long, choppy ocean liners and bumpy truck rides. Weight Limits and Handling Weight limitations are every bit as significant as volume. If modules are packed higher than 48", trucks will not be able to double stack pallets. No unsupported, free-standing pallet stacks.
