

**PIENAAR ENERGY (PTY) LTD**

**How many photovoltaic panels  
are needed to generate 15 kWh  
of electricity**

## Overview

---

Enter your monthly electricity consumption and location details to calculate required solar panel system size.  $\text{System Size (kW)} = (\text{Monthly kWh} \times 12) / (365 \times \text{Sun Hours} \times (1 - \text{Losses}/100))$  This formula has been verified by certified solar engineers and complies with industry. Are you wondering how many solar panels you need to produce 15 kWh per month?

This question is more common than you might think, and it's a crucial starting point for anyone considering solar power. Figuring out exactly what you need can seem complicated with so many variables—from sunlight hours. Location Impact is Massive: The same home using 1,000 kWh monthly could need just 16 panels in sunny Arizona but 22 panels in Massachusetts due to solar production ratios varying from 1. Here's how to figure out your magic number. It takes into account factors such as the daily energy needs of a household or business, the efficiency of the solar panels, the average peak sun hours per day.
