# **How many volts does a 200-watt solar panel require**

## Overview

---

The two types of voltage outputs for 200-watt panels are 18V and 28V. This produces around 11 amps per hour. 12v 200 watt solar. In the case of a 200-watt solar panel, the specific voltage it produces depends on various factors such as sunlight intensity, temperature, and internal resistance within the panel itself. The amperage of the solar panel is generally specified by the manufacturer under  $I_{mp}$  or  $I_{mpp}$ , which stands for Current at Maximum Power. In the next sections, you'll get: Real-world output (not STC fantasy) so you know your daily energy budget. Electricity can be quantified by the formula: Power (Watts) = Voltage (Volts) × Current.
