# How much does a double-glass photovoltaic panel weigh

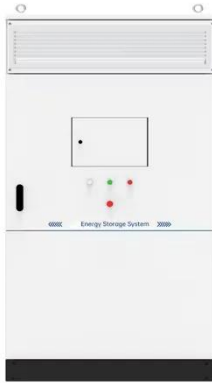

## Overview

---

Due to their increased surface area and frame material, they weigh significantly more, generally ranging from 23 kg to 28 kg (approximately 50 lbs to 62 lbs). 2,278 mm x 1,134 x 32 mm and weigh 32 kg. 0 mm heat-strengthened glass, with anti-reflective coating. The modules have IP68 junction boxes and anodized aluminum alloy frames. They can operate with a system voltage of 1,500 V and in the top, can increase solar energy production. However, solar systems with 8kW rated capacity and above add more than 1,000 lbs to your roof. In general, a 60 cell residential solar panel weighs between 35lbs and 50 lbs (16-22 kg) and can produce between 300 and 400 watts of power. Let's explore why this unsung hero deserves your attention. A typical 72-cell solar panel with 3.
