How much power does the RV need to turn on the inverter

Overview

In order to adequately power an entire RV, you may need an inverter with a capacity between 3000 to 4000 watts. When your RV is plugged into shore power, you're bringing a source of 120V AC electricity into your RV to power those appliances and devices, just as if you were at home. But the battery bank in your RV provides 12V DC power. So, when the source of your RV's power is a battery bank (as it is when. Inverter: Converts DC (battery) power into usable AC (appliance) power. Inverter/Charger: Does all of the above, plus recharges your batteries when connected to shore power or a generator. This guide provides a step-by-step walkthrough for safe and effective inverter installation, transforming your RV.
