Overview

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same 0.58V. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the. The calculated amps from watts and voltage are 10 to 12 amps per hour for a 200-watt solar panel. Monocrystalline panels tend to produce higher voltages. When sunlight strikes the solar cells, photons (light particles) excite electrons, creating an electrical potential difference (voltage) across the cell.
